Box No. II Priority

1. This report has been established as if no priority had been claimed due to the failure to furnish within the prescribed time limit the requested:
 - copy of the earlier application whose priority has been claimed (Rule 66.7(a)).
 - translation of the earlier application whose priority has been claimed (Rule 66.7(b)).
2. This report has been established as if no priority had been claimed due to the fact that the priority claim has been found invalid (Rule 64.1). Thus for the purposes of this report, the international filing date indicated above is considered to be the relevant date.
3. Additional observations, if necessary:

see separate sheet

Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

1. The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non-obvious), or to be industrially applicable have not been examined in respect of:
 - the entire international application,
 - claims Nos. 8-10 with respect to industrial applicability
 - because:
 - the said international application, or the said claims Nos. 8-10 relate to the following subject matter which does not require an international preliminary examination (specify):
see separate sheet
 - the description, claims or drawings (*indicate particular elements below*) or said claims Nos. are so unclear that no meaningful opinion could be formed (*specify*):

II

The priority of the present claims has been checked.

Claims 1-3 are fully entitled to the earlier priority.

Claims 4 relate to specific compounds not disclosed in the priority document, such that these claims are not entitled to the earlier priority

Claims 5-11 refer partially to claim 4 and thus are only partially entitled to the priority.

Claim 12 is not entitled to the previous priority.

Thus D1 (US 2004/072817 A1 (ANDERSON DAVID ET AL) 15 April 2004 (2004-04-15)), which has a publication date between the priority and filing dates of date is relevant to the examination of novelty and inventive step of claims 4-12, but not claims 1-3.

III

For the assessment of the present claims 8-10 on the question whether they are industrially applicable, no unified criteria exist in the PCT Contracting States. The patentability can also be dependent upon the formulation of the claims. The EPO, for example, does not recognize as industrially applicable the subject-matter of claims to the use of a compound in medical treatment, but may allow, however, claims to a known compound for first use in medical treatment and the use of such a compound for the manufacture of a medicament for a new medical treatment.

Claims 8-10 relate to subject-matter considered by this Authority to be covered by the provisions of Rule 67.1(iv) PCT. Consequently, no opinion will be formulated with respect to the industrial applicability of the subject-matter of these claims (Article 34(4)(a)(I) PCT).

**INTERNATIONAL PRELIMINARY
REPORT ON PATENTABILITY
(SEPARATE SHEET)**

International application No.

PCT/IN2004/000155

Reference is made to the following documents:

- D2: EP-A-0 314 362 (PFIZER INC) 3 May 1989 (1989-05-03)
- D3: US-a-4 727 080 (SOLER ET AL) 23 February 1988 (1988-02-23)
- D4: US-a-4 670 444 (GROHE ET AL) 2 June 1987 (1987-06-02)
- D5: EP-a-1 227 096 (SATO PHARMACEUTICAL CO. LTD) 31 July 2002 (2002-07-31)

Novelty

The compounds of the present claims differ from those of D2-D5 through the 6,7-4H-thieno[3,2c]pyridine or 6,7-4H-furano[3,2c]pyridine or 6,7-4H-pyrrolo[3,2c]pyridine groups at the 7 position of the quinoline moiety.

The compounds of claim 4, differ from those of D1, through the presence of the cyclopropyl group at the 1-position.

Inventive Step

Priority valid

The closest prior art is considered to be D4, which discloses quinolinones having antibacterial activity.

The problem underlying the present invention is considered to be the provision of further quinolinone compounds having antibacterial activity.

For the case that NR¹R² forms a cyclic group in the compounds of D4, these are only monocyclic groups such as piperazine. D5 discloses oxoquinolinizine substituted by a bicyclic groups, these groups are however structurally too different from the corresponding groups claimed (cf novelty), such that the skilled person would not have arrived at the claimed compounds.

An inventive step may therefore be acknowledged for claims 1-4.

(SEPARATE SHEET)**

International application No.

PCT/IN2004/000155

Priority Not Valid

The closest prior art is considered to be D1, since these disclose in claim 1 generally compounds which differ from those of claim 4 through the presence of a cycloalkyl group rather than a butyl group.

The problem underlying the present invention is considered to be the provision of further quinolinone compounds having antibacterial activity.

It is not considered that the skilled person could have arrived at the specific bicyclic groups in combination with a cyclopropyl group, such that an inventive step can also be acknowledged for claim 4.

Certain cited documents

The priority of the present application is valid for claims 1-3.

For these claims US 2004/072817 A1 ((ANDERSON DAVID ET AL) 15 April 2004 (2004-04-15)) does not constitute prior art within the meaning of Rule 64.1 (b).
